

Strip & Wrap Fixtures

Products installed
are approved for
Ontario Energy
Incentive Program

LED products are great for
new or replacing existing fixtures

Applications:

Strip Fixtures are suitable for general use in utility rooms, picking aisles and other indoor spaces where appearance is not critical. Typically, these are low cost fluorescent fixtures.

The addition of the acrylic lens reduces glare and also improves the fixture appearance making it suitable for offices, retail and meeting rooms.

These are available in T8 fluorescent but most installations are now using LED technology.

Vapour seal options are ideal for indoor or outdoor use where exposure to dust, water or vapour is common.

Retrofitting of existing T12 wrap fixtures to LED, T5 or T8 is a cost effective option and we can offer special kits for this purpose.

Features:

- 2', 4', 8' are suitable for continuous row mounting
- LED with lamp and module options available
- Input voltage of 120-277V, or 347V
- Dimmable
- Suitable for surface, pendant or chain/cable mounting
- Various colour options available
- CSA Certified and DLC Listed to qualify for utility incentives
